

Select **"Job type"**.

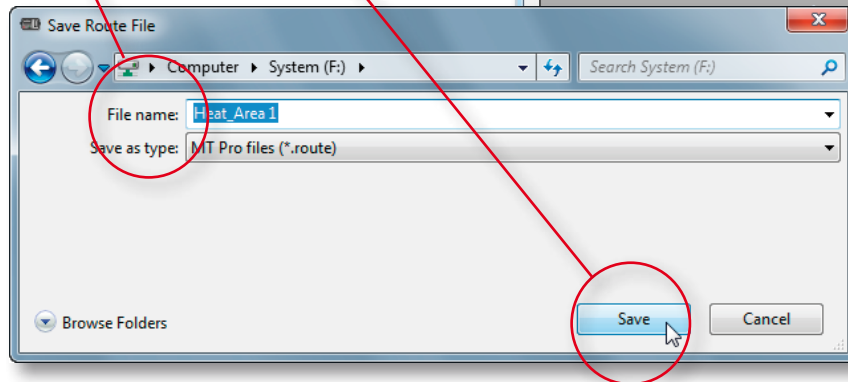

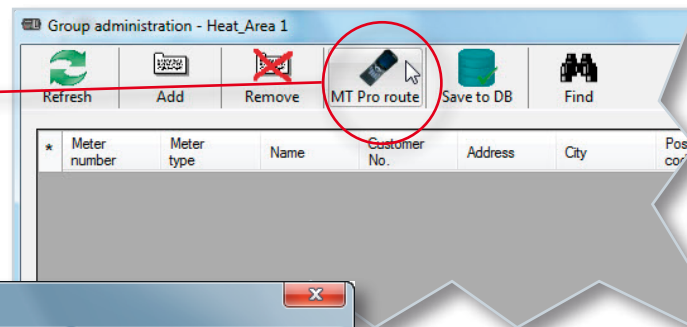

The route is initially sorted alphabetically by street names.

Click on **"Save to DB"**.

### Transfer the route to MULTITERM Pro wM-Bus

Click on **"MT Pro route"**.

Indicate a name for the route, and click on **"Save"**.

The route has now been created in **PcBase III** and is ready to be transferred to MULTITERM Pro via the docking station.

For more information about reading, see **"Getting started – MULTITERM Pro wM-Bus"**.

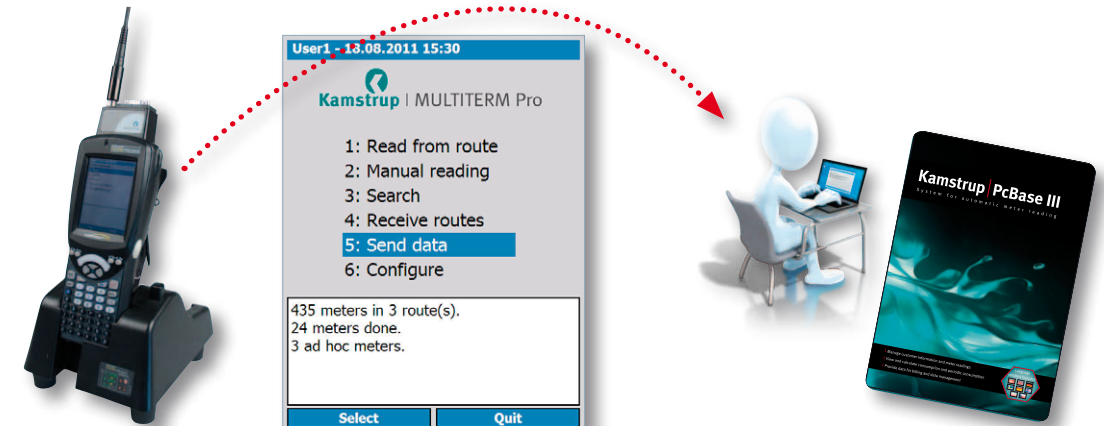

### Transfer of read data from MULTITERM Pro wM-Bus to PcBase III

Start PcBase III and PcTermPro III.

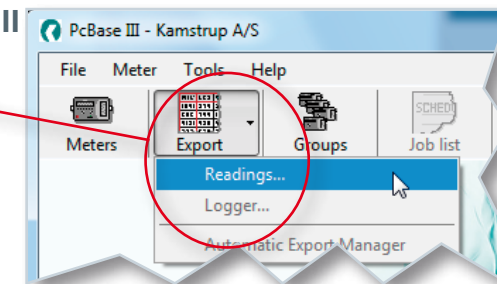

Place the hand-held terminal MULTITERM Pro wM-Bus in the docking station.

Select **"Send data"** on the hand-held terminal. Data will then be transferred to PcBase III.

### Export of data from PcBase III

Click on **"Export"** and **"Readings..."**.

Select **"From"** and **"To"**.

Select the number of **"Readings per meter"**.

Select the **"Export format"**.

Select whether to export to screen or file.

If you select **"Screen"** and then click on **"Export"**, the exported readings will be shown.

Click on **"Close"** in this window.

If you select **"File"** and then click on **"Export"**, it is possible to save the readings as a .txt file.

Subsequently, this file can be opened in e.g. Microsoft Excel for further processing or exported to CIS (CustomerInformationSystem).
