Remote reading of
heat and cooling
meters with app for
smartphone and
tablet

READy Suite – because the work day holds other activities

Simple reading

To date, READy Suite is the most simple remote reading system. With an Android smartphone, a small converter unit for the car and a software package for PC, you can read water and heat meters remotely directly from the car.

The reading takes place automatically. You do not have to follow a fixed route or keep track of the order. By means of Google Maps, the installations of your consumers are automatically placed on a road map on your smartphone, and when you drive through a residential area, your smartphone automatically shows nearby meters, meters being read, and meters to be read. It does not get more simple than this.

Fast and secure data transfer

READy Suite is dedicated to electronic heat and cooling meters and can be used for MULTICAL® 302, MULTICAL® 601, MULTICAL® 602, MULTICAL® 801 and MULTICAL® 402.

The data package, which is read, is short and transferred quickly. Actually, the transfer is so quick that you can drive with normal speed in urban areas and still collect all readings.

You can always only read the installations present in your customer database. This is guaranteed by the electronic safety lock which is default in all Kamstrup's meters. The safety lock protects the meter's data against unwanted access. Only with the right electronic key, the meter can be unlocked for remote reading. Lock and key are unique for each meter and must correspond to each other. This ensures you that you – and only you – can read the correct meters.

How to get started

Install an app on your smartphone, synchronise with the related PC program, and bring your smartphone along in your car.

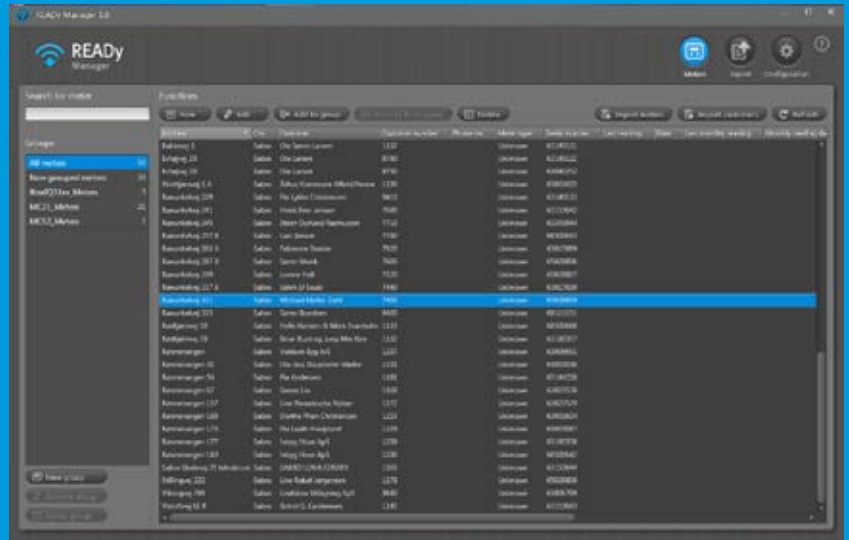

With READy, you always have remote reading near at hand and can automatically read the meters which you pass on your way – also even if you are making phone calls or receiving an sms.

15,000 readings or 6-7 holiday photos

With READy, you always have remote reading handy. READy requires no adaptations to your smartphone, and you can use your smartphone as usual. A complete customer database with up to 15,000 readings does not consume more space than a couple of holiday photos.

Reliable billing

Via the export feature of the software program, all read consumption data can be transferred directly and without any additional entries to your existing billing program. READY Suite supports all relevant data formats and billing programs.

Remote reading of data

Whether you have to carry out a reading on change of occupancy of a single meter or a yearly reading of a complete residential area, with READy Suite, you can always read the necessary data on the move.
