## Easy, fast and reliable remote reading

- Collect data automatically or via drive-by
- Detect leakages or unusual consumption levels
- Access consumption data whenever it suits you

READY

## Maximum benefit of remote reading – without the hassle

With a READY remote reading system, you can say goodbye to annual reading cards with unreadable handwriting, delayed return of these and the hassle of obtaining access to tenancies in order to read meters.

READY replaces the difficult and time-consuming manual collection of data with easy, fast and reliable meter reading. And you can access data whenever you want. READY is more than just a meter reading system. It is also a service tool that allows you to respond to leakages or unusual consumption levels, and thereby save your tenants for unexpected extra bills.

"It saves us a lot of time and effort. I have previously crawled around in mud and rain in order to read old mechanical meters. Now, I can get the job done in a few minutes, right from my desk. It is brilliant."

*Arne Papp, Deputy Chairman on the Board of Directors at the allotment society, Ishøjgaard*

## Small steps or everything at once – it is up to you

READY is designed with flexibility and user-friendliness in focus, so you can handle your remote reading in the pace that suits you best and without having to make a big investment.

It is easy to get started and you can always customise the solution to fit your needs, without having to replace your meters. Start with a drive-by solution that can easily be extended over time or move straight to a fully automated network solution. No matter how you prefer to do it, you will quickly experience how easy remote reading can be.

"As a minimum, we read the meters once a month to get data. In this way, we ensure that any leaks are discovered very early. Prior to the remote reading system, we just didn't discover smaller leaks in residents' apartments until we carried out the annual reading."

*Henrik Hansen, Senior Caretaker in Gildbroterrasserne Homeowners' Association*

## Drive-by meter reading – collect data on the go

With READYy drive-by you can read meters from your car, while on the go. All you need is the READYy App on an Android smartphone or tablet, a READYy converter and the PC program, READYy Manager.

The meter reading happens automatically while you drive, and a map on your smartphone displays nearby meters and meters to be read. You do not have to follow a specific route and the readings are collected so fast that you can drive at city-speed and still collect all data on consumption, leakages etc. When you are done, it only takes a few clicks to export data to your own or external application, e.g. your billing program. Or get data automatically in your preferred interval.

## Network reading – it does not get easier than that

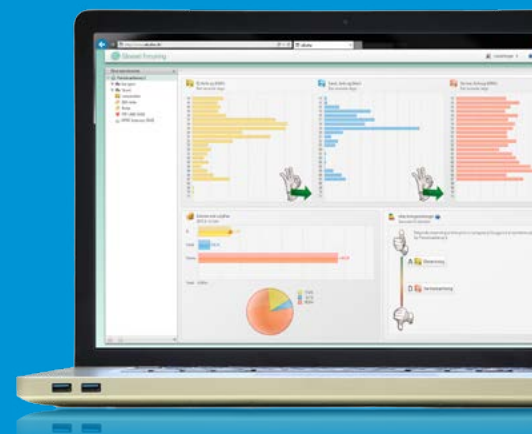

It does not get easier to read meters than with a READYy network solution. All you need is a number of collection units placed strategically relative to your meters, and the PC program READYy Manager.

The meter reading happens automatically. So while the system collects the data that gives you a complete overview of consumption, leakages and other irregularities, you can spend your time on other important tasks. It only takes a few clicks to export data to your preferred billing program, or you can have them exported automatically. It does not get easier than that.

## eButler – consumption data at your fingertips

In addition to your remote reading, eButler provides a graphical overview that makes it easy to monitor and compare consumption across tenancies and common areas.

eButler provides tenants with an easy and user-friendly overview of their consumption. This helps them become aware of their own consumption behaviour – you'll be surprised how big of an effect that can have on future consumption. Also, alerts on unusual high consumption help tenants avoid unexpected bills. If they simply want a little insight from time to time, they can receive a report at regular intervals instead.

## We create progress for others

Kamstrup is a world-leading supplier of intelligent solutions for optimising consumption of water and energy. We are 100% Danish and one quarter of our employees work with innovation. Our solutions are used by utilities, property managers and building owners all over the world, for reliable and cost-effective metering. By anticipating our customers' challenges, we enable them to run a better business and inspire smarter, more responsible solutions for the buildings they administrate or own.

Our solutions range from consumption meters, smart metering systems, hosting and services to analytics and system operations. All products are produced in Denmark with the highest certifications for environmental safety and quality, and we are represented in more than 80 countries worldwide by local offices or distributors.
